

GRID SOLUTIONS

Electricity Trading Solutions

Grid Solutions, Inc.

Overview of Electricity Trading Solutions (1/3)

Overview of Electricity Trading Solutions (2/3) ~Resource Control~

Based on the **demand**, **power generation**, and **price forecasts** by "Forecast Engine", "Optimization Engine" generates a **charge / discharge plan** for the storage battery that **avoids imbalance**.

Charge / Discharge Plan

Overview of Electricity Trading Solutions (3/3) ~Trading plan~

Based on **power generation and spot price forecast** by "Forecast Engine", "Optimization Engine" creates a **transaction plan at JEPX for the next day**.

Main functions provided by Electricity Trading Solutions (1/2)

Forecast Engine

PV Generation Forecast

- Since the amount of power generated by renewable energy resources is constantly changing, it is necessary to improve the forecast accuracy. Our AI-powered engine predicts PV power generation through external APIs such as resource performance data and weather information, and links the forecast data to business logic.
- Our AI-powered forecast engine is a tool that **uses machine learning algorithms and deep learning** to automatically make forecasts based on time series. This algorithm trains predictive models and handles outliers and missing data sets.
- Our engine provides 2-day forecasts and the interval can be set on request (ex.30 min)

JEPX Price Forecast

- Provides price forecasts for the JEPX Spot Market.
 - ✓ Prices : System price, Area prices
 - ✓ Period : Day, Week, Month
- Since the data pattern of the Spot Market is different from PV generation, and that the price forecast time period is 1 day ahead, we have revised the logic of data modeling, model algorithms, and config from the PV Forecast Model.
- Some of our price forecasts are available free of charge on our website.

Main functions provided by Electricity Trading Solutions (2/2)

Optimization Engine

Schedule Optimization

- Our Optimization Engine creates a **demand and supply plan to avoid imbalance**, based on the actual resource performance and the power generation forecast provided from the forecast engine. At that time, the optimization engine can **autonomously create control instructions for resources without relying on control instructions from the grid**.
- Our business logic checks for supply and demand imbalances every 30 minutes, and if imbalances occur, returns a response to the optimization engine, which recreates the demand and supply plan.

Payoff Optimization

- Our Engine also creates a trading plan for the JEPX spot market based on the 48-hour optimized schedule. For the time of the successful bid, the Engine creates a control instruction for the amount of the successful bid.
- The transaction price can be set in the following two ways
 - ✓ **AI-based Optimal price logic**: Optimization engine directs buying and selling at a price that maximizes payoffs
 - ✓ **Arbitrary threshold price**: Instruct to buy or sell at the threshold set by the customer

Company Overview

- ❑ Company Grid Solutions, Inc
- ❑ Location Suite 311 5-26-8 Kamata Ota-Ku Tokyo 144-0052
- ❑ Founded April 2012
- ❑ CEO Yohei Takahashi
- ❑ Bank SMBC Kashiwa Branch
- ❑ Business Development of Smart grid, Demand Response, VPP solutions
 - ✓ OpenADR solutions
 - OpenADR2.0b certified (VTN, VEN)
 - ✓ VPP solutions
 - ✓ AI-based forecast engine
 - ✓ Participated in the Capacity Market, and Demand and Supply Adjustment Market
